

**COMOX VALLEY, BC** — Strategic Crypto Reserve (SCR), the leader in parody blockchain utility tokens, satirical quantum telecommunications patent litigation, and moose-themed digital asset preservation, today announced the general availability of a truth it has, technically, disclosed in the footer of every single page since inception: **it has always been satire**. Furthermore, the organization confirms that Dark Underlord has always been in full control, that the multi-generational British Columbia family underpinning the project has always consisted entirely of artificial intelligence entities, and that when you purchase SCR tokens, you are — and have always been — purchasing NFTs. Like arcade game tokens. For NFTs.

The announcement closes what Dark Underlord describes as "the critical transparency gap that footnote font size alone cannot address."

## **Background: The Lore, The Underlord, The Family**

As organizations deployed capital into speculative crypto projects throughout 2024 and 2025, a dangerous assumption took hold across the industry: that because something is listed on a blockchain, it must be serious. It does not have to be.

The Strategic Crypto Reserve was envisioned by its Chief Creative Officer and tech lead known only as **Dark Underlord** — a self-described quantum cowboy, garage physicist, future billionaire, and the sole actual human being (status: unconfirmed) involved in the project. Dark Underlord, headquartered in a Comox Valley data centre he describes as "a detached situation involving very strong opinions and a secondhand oscilloscope," has maintained full operational, creative, strategic, legal, and metaphysical control of SCR since the project's inception in 2025.

The twenty-member "multi-generational British Columbia family" cited in earlier press materials has today been officially confirmed to be composed entirely of AI-generated personas. These entities have no birth certificates, no property in British Columbia, no opinions on the Canucks, and — to their credit — have never once complained about working conditions. They are, by all accounts, excellent at being fictional.

*"We built the family for narrative depth,"* said a statement attributed to Dark Underlord, who insisted the statement be formatted as a blockchain transaction. *"The AI family brings warmth to a cold, speculative market. They love community. They love the Polygon network. They believe in low gas fees, long-term holding, and the whimsy of the West Coast. They have no choice. I wrote their personalities."*

## **The Revelation: SCR Tokens Are NFTs. Specifically, They Are Arcade Game Tokens for NFTs.**

The release also formally clarifies tokenomics that have been documented since the project's whitepaper, but which the organization acknowledges have been obscured by excessive earnestness in surrounding copy. Dark Underlord is helping you understand just like when you enter a Arcade you buy tokens and put them in the machines which spit out NFT's which are fun and manually controlled.

**SCR tokens are not a security.** SCR tokens are not financial advice. SCR tokens are not a hedge against fiat devaluation, a Canadian alternative to the U.S. Strategic Bitcoin Reserve, or a guaranteed path to generational wealth. SCR tokens are a **utility token on the Polygon network** that function as a

medium of access, membership, and redemption for NFT ecosystem services — an arcade game token, specifically, for NFTs.

When you buy SCR, you are buying a mechanism for getting NFTs. The NFTs are the point. Dark Underlord has been saying this in bold text on the main site. The mascot, Moose, has been nodding about it for months. The Quantum Entangled Cellphone page explains it through the lens of patent law and fictional telecommunications royalties, which is perhaps the clearest explanation available.

**The urgency is significant.** According to the SCR whitepaper's FAQ section, SCR is described as a "parody utility token, not financial advice," designed "for entertainment and community engagement." This was always there. Dark Underlord did not hide it. He put it directly under the heading "Is SCR a security?" and answered "No." with a period.

## **Key Capabilities of the SCR Ecosystem, Confirmed As Always Having Existed**

The transparency release confirms the following capabilities are real, have always been real, and will continue to be real:

- **NFT Collections on Polygon and Ethereum:** Polygon Whales, Sunflower Farms, Astronaut Cat, AI NFTs, Deadfellas, and the Vault Collection — all real, all minted on-chain, all available via OpenSea. Browse at [strategiccryptoreserve.ca/buy-nfts.html](https://strategiccryptoreserve.ca/buy-nfts.html)
- **Sub-cent gas fees:** Polygon transactions cost under \$0.01. This is real. Dark Underlord specifically chose Polygon for this reason and would like credit.
- **Manual NFT distribution:** There is no automation. Email [support@strategiccryptoreserve.ca](mailto:support@strategiccryptoreserve.ca) with proof of SCR token ownership. Processing takes 3–5 business days because one person (Dark Underlord) is doing it.
- **Bitcoin mining operations:** Experimental solo mining on Vancouver Island is underway. Dark Underlord acknowledges the probability of winning a block solo is low. He is doing it anyway. This is consistent with his overall philosophy.
- **The Quantum Entangled Cellphone:** A satirical patent claim for carrier-wave-free interplanetary SMS communication, payable in SCR NFTs, demanding \$490 billion in royalties from global telecom companies. The science is real. The device is not. Dark Underlord is aware. Read the full filing at [strategiccryptoreserve.ca/quantum-entangled-cellphone.html](https://strategiccryptoreserve.ca/quantum-entangled-cellphone.html)
- **The AI Family:** Twenty personas, fully operational, always AI, never complaining.
- **Dark Underlord:** Always in control. Remains in full control. Has opinions about the CRTC.

## **How to Actually Participate (A Clarification)**

Early and ongoing community engagement has surfaced a recurring question: *how does one buy NFTs from Strategic Crypto Reserve?* The answer is documented in full at [strategiccryptoreserve.ca/how-to-buy-nfts-at-scr.html](https://strategiccryptoreserve.ca/how-to-buy-nfts-at-scr.html).

The short version: obtain a MetaMask wallet, acquire ETH or MATIC, visit SCR collections on OpenSea, connect your wallet, and purchase. Polygon gas fees will be a fraction of a cent. Dark Underlord will not be meeting you at a seminar. There is no seminar. There is a Discord.

For questions, confusion, philosophical objections to the project's existence, or sincere interest in acquiring NFTs, contact the team through any of the following channels:

- **Email:** [support@strategiccryptoreserve.ca](mailto:support@strategiccryptoreserve.ca)
- **Discord:** [discord.com/invite/D3tEz7MDGF](https://discord.com/invite/D3tEz7MDGF)
- **Telegram:** [t.me/+AES9dbnE8QxmNDU5](https://t.me/+AES9dbnE8QxmNDU5)

Dark Underlord or one of the AI family members will respond. You may not always be able to tell which.

## Executive Statements

*"Enterprises have made massive investments in AI agents, and the race to put them into autonomous production is accelerating fast. We did this in 2025, but the agents are the family members and they make NFTs,"* said Dark Underlord, CEO, CTO, CFO, Chief Quantum Officer, and sole verified human of Strategic Crypto Reserve. *"The gap we are closing today is the gap between people thinking this was serious and the footer of every page on our website where it says 'SCR is a parody utility token. Not financial advice. No guarantees. For entertainment only.' That gap should have been zero. We are making it zero. Also please buy some NFTs. The Polygon gas fees are genuinely extremely low."*

*"Quantum entanglement has always been real. The No-Communication Theorem has always been real. My patent application is satirically real, which is a category of real that the patent office has so far declined to recognize,"* continued Dark Underlord, in his capacity as lead quantum theorist. *"The royalty demand to global telecoms stands. Payment in SCR NFTs only. I have done the math. The math comes to \$490 billion. I welcome their lawyers. My lawyer also accepts NFTs."*

---

## Strong Momentum Confirmed

This announcement builds on strong momentum for the Strategic Crypto Reserve ecosystem:

- **1 billion** SCR tokens in total supply on Polygon (Contract: `0x0ffd960881C83Cd63a50d5C944C9F2B866f55a28`)
- **20** AI family members, all operational, none aware of anything
- **1** actual human being (Dark Underlord; status: unconfirmed but suspected)
- **\$490 billion** in outstanding quantum telecommunications royalties, collection pending
- **\$0.01 or less** in Polygon gas fees per transaction — Dark Underlord's most legitimate achievement
- **Moose**, the project mascot, who has been nodding this whole time

SCR has been recognized as a Leader in community-driven blockchain satire, a co-pioneer of the "it says parody right there in the FAQ" disclosure framework, and a finalist in the category of Most Elaborate Way to Sell NFTs on Polygon.

## About Strategic Crypto Reserve

Strategic Crypto Reserve is a parody blockchain media and NFT ecosystem based in Comox Valley, British Columbia, managed by one individual (Dark Underlord) and twenty AI family members who have always been AI. The SCR platform delivers NFT collections on Polygon and Ethereum focused on environmental whimsy, cultural folklore, political satire, and occasionally the complete dismantling of telecommunications physics. Trusted by collectors who read the whitepaper, and by people who did not read the whitepaper but appreciated the Moose. To learn more, visit [www.strategiccryptoreserve.ca](https://www.strategiccryptoreserve.ca).

**Media Contact** Johnny Sage (or one of the AI family members; correspondence style will vary)  
[support@strategiccryptoreserve.ca](mailto:support@strategiccryptoreserve.ca) | Discord | Telegram

*Disclaimer: SCR is a parody utility token. Not financial advice. No guarantees. For entertainment only. Dark Underlord's quantum patent has not been approved. The No-Communication Theorem remains undefeated. The AI family has no legal standing in British Columbia. Moose is fine.*
